- Evaluating business processes, anticipating requirements, uncovering areas for improvement, and developing and implementing solutions.
- Leading ongoing reviews of business processes and developing optimization strategies.
- Staying up to date on the latest processes and IT advancements to automate and modernize systems.

## Projects

### Forkify App

[Code link](#) --- [Live View](#)

- The Forkify app is a recipe app that allows users to search for and view recipes from an API.
- The app is built using the Model-View-Controller (MVC) architecture, which separates the app's data, logic, and presentation into separate components. This makes the app easier to maintain and update over time.
- The app is bundled using Parcel, a web application bundler that helps optimize the app's performance and speed up development time.
- When the app loads, it fetches recipe data from the API and renders it on the screen.
- Users can search for recipes by entering keywords in the search bar.
- The app also allows users to bookmark recipes and save them to a list. This list is saved in the user's local storage and can be accessed even after the user closes the app.
- Users can also upload their own recipes to the app. These recipes are only visible to the user who uploaded them and are not shared with other users.
- Overall, the Forkify app is a user-friendly and customizable recipe app that allows users to easily find and save their favorite recipes.

### Mpty App

[Code link](#) --- [Live View](#)

- The Mpty app is designed for fitness enthusiasts who want to store and track their workout data.
- The app uses class architecture and follows object-oriented programming principles for efficient and organized code design.
- The app uses the Geolocation API to retrieve the user's current location, enabling them to view all workouts recorded in an area.
- Users can view all workouts recorded in a specific area by manually dragging the map to the desired location.
- Users can view their workout history and track their progress over time, allowing them to see how they've improved.
- The app stores the user's workout data in local storage for easy access.

### Omnifood App

[Code link](#) --- [Live View](#)

- The Omni Food website is a technology company that focuses on promoting consumer well-being through healthy eating habits.
- The website offers an AI-powered meal planning service that allows users to select their dietary preferences and receive a custom weekly meal plan.
- In addition to meal planning, the website partners with restaurants and cooking partners to prepare and deliver all meals from the generated meal plans to be selected cities. Users can choose between receiving one or two meals per day, every day of the month, through a monthly subscription.
- Additionally, the contact us page includes a feature that allows users to track their route from their current location to the company's location, making it easier for users to find the location.

### Couchly App

[Code link](#) --- [Live View](#)

- The Couchly app is a furniture shopping app that allows users to view a variety of products and their details.
- Users can browse different categories of furniture, such as sofas, chairs, and tables, and view photos, descriptions, and prices for each item.
- The app also includes an FAQ page that provides users with answers to the most asked questions about the company's products and services.
- Overall, the Couchly app is a convenient and user-friendly way for users to explore different furniture options and get answers to their questions before making a purchase.
